

Cloud-based Security is the New Generation of Email Defense

ActiveCare SaaS Email & Web Security

While it may seem contradictory, it's possible for something to be both easy and difficult. Take business communication. While it has increased in swiftness and ease with online access and delivery, the same access is making it difficult to control overall communication integrity. ComTech Computer Services, Inc. is committed to protecting the network security of today's businesses – ranging from the small to the enterprise. Today, we support users with our portfolio of Software-as-a-Service (SaaS) offerings, including email and web protection, email continuity and archiving services, endpoint protection and vulnerability management.

We recognize that secure communication does, and will continue to, transcend far beyond email. That's why our industry-leading threat engineers developed ours as a SaaS model which can be rapidly reprogrammed as new threats are released into the wild and new electronic communication policies are issued. With our flexible, future-focused solutions, ActiveCare SaaS Email and Web Security can help your business:

- Reduce disruption
- Safeguard communication integrity
- Increase employee productivity
- Increase IT utilization on high-priority development needs and priorities
- Reduce costs associated with Web and email threat management
- More effectively manage email storage and increase compliance with e-discovery regulations
- Eliminate online security capital expenditures

Protects your organization from spam, viruses and worms, email attacks and fraud,

Security Your Company Can Count On

Advanced technology backed by expert support

Powered by patented technology, ActiveCare SaaS services provide multiple, dynamic layers of anti-virus and anti-spam protection in a single solution, while our disaster recovery services and message archiving are developed on a highly-sophisticated technology platform made easy for general staff and IT administrators to manage. The complete ActiveCare security SaaS portfolio leverages the company's large install base and impressive threat intelligence capabilities, providing customers with the most insightful and comprehensive view of the evolving threat landscape.

- All services are monitored and updated 24x7 by highly-skilled threat experts in the ComTech Threat Operation Center
- Our customers receive peace of mind knowing that a US-based support staff is available by phone or Web 24x7, 365 days a year
- Technical support is always free

Confidence and ease by design

You can feel more confident that your business email and network security is protected with ComTech Labs at the core of your service. Our threat center technologists monitor the global state of email and Web traffic around the clock – providing a dynamic, proactive defense. Easy to administer and affordable, ActiveCare SaaS:

- Offers straight forward month-to-month contracts
- Prices its services based on the number of employees using it

Spam is now the foremost delivery mechanism for breeding thousands of forms of destructive malware, while legions of growing online threats are undermining Web-based activity. Add strict electronic security regulations and your business needs complete online protection from ActiveCare SaaS Email and Web Security. Our award-winning SaaS solutions are widely recognized for superior protection, fail-proof reliability and overall ease-of-use. Today, we offer a complete suite of online security solutions including:
